iAtlantic General Assembly Social Media Policy

The iAtlantic project embraces wider dissemination, collaboration and partnership and has established several social media channels to facilitate this.

During our General Assembly meeting, many of our speakers will be presenting exciting novel research that is not yet published. While iAtlantic has an active social media presence, we respect the speakers' right to request that their work not be shared across social media. The sharing of data or figures without the speakers' consent on publicly accessible platforms may prevent its subsequent publication in scientific journals and compromise their scientific progress. In light of this, we request that all meeting participants adhere to this social media policy.

During the 2020 General Assembly we ask all presenters to make it clear during their talks if any data, research plans or other information need to be kept confidential. This should be explained verbally and by inserting a graphic similar to the example below on the relevant PowerPoint slides.

Presenters should give out their social media handle and affiliation in their title slide. If you want recognition, give tweeters the details.

Recording or reproducing audio or video of any content presented at the meeting is strictly prohibited.

Finally, it goes without saying that we ask all participants to uphold the values of intellectual collegiality and accuracy, and to respect context at all times to avoid misrepresentation and appropriation.

Provided there are no restrictions on dissemination, we encourage participants at the iAtlantic General Assembly to share information through their social media accounts using the following:
